DETAILED ACTION

Information Disclosure Statement

1. The Information Disclosure Statement (IDS) filed on 2/11/2004 is in compliance and has been considered by the examiner.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Phil Pedigo on March 1, 2007.

The application has been amended as follows:

On line 10 of claim 27, insert "the" between "and" and "memory".

On line 2 of claim 43, delete the phrase "double data rate".

Allowable Subject Matter

3. Claims 27-52 are allowed.
4. The following is an examiner's statement of reasons for allowance: A search of the prior art revealed Lai et al. (US Pat. 6,738,880) and Pohm et al. ("The Cost and Performance Tradeoffs of Buffered Memories", IEEE). Lai et al. disclose a buffer between a chipset and a memory module for temporarily storing write and read data for the memory module in such a manner that the chipset interface is electrically isolated from the memory interface. However, Lai et al. do not show interleaving the outputs of

multiple such buffers together. Pohm et al. show interleaving the outputs of caches that buffer main memory, resulting in improve system performance, but the operation of the cache buffers of Pohm et al. is significantly different from the operation of a buffer that temporarily stores data for a write or read transaction for a memory module so the interleaving of Pohm et al. cannot be combined with the buffer structure of Lai et al. The prior art of record including Lai et al. and Pohm et al. does not show a memory buffer with all the features of the claimed invention in the instant application wherein the outputs of more than one buffer are interleaved together.

The claims of the instant application are distinguishable from the claims of the parent application for at least the reason stated above for the claimed intention being distinguishable over the prior art because it is not obvious to interleave the outputs of multiple buffers with the structure recited in the claims of the instant application.

Therefore, a double patenting rejection would not be appropriate.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
